

DSK 5000 Shipboard Command Center Surge Suppressor

Exclusively distributed worldwide by Wright Computer Products, Inc.

Contaminated power is the biggest threat to microprocessor based equipment, including computers, peripherals, or any other electronic equipment. Electrical disturbances caused by surges, spikes and noise – transmitted via wall outlets and power strips can destroy valuable equipment. With technology ahead of its time, the DSK-5000 Personal Power Command Center has been specifically engineered and designed for shipboard use. It has more features and functions than any other comparable unit approved by the U.S. Navy.

- Rated at 1600 joules, the DSK-5000 delivers the ultimate in power protection
- Three-stage suppression circuit effectively controls surges, spikes and noise
- Designed for both land and shipboard power
- Six lighted switches; five switch-controlled outlets for five separate electrical devices and one master-switch
- For additional user safety, the DSK-5000 is constructed of high-quality steel
- Shipboard mounting brackets available on request
- Installation in custom furniture is available
- 2 1/4" high x 14 1/4" wide x 11 1/4" deep
- Dual 12-Amp circuit breakers
- 6' power cord

The DSK-5000 is a three-stage 1600 joule protection system that eliminates power surges and spikes, and significantly reduces line noise. The result of applying the DSK-5000 to your system is reliable working equipment and accurate data.
